

Study Management Assistant™

Robust and Complete Tool Set for Clinical Data Capture:

Study Assistant is a full featured package for managing all aspects of a clinical study. Some of the main areas include: patient requirements (recruiting, screening, and enrollment), doctor and institution requirements (staff qualifications, previous experience, and potential problems), case report forms, and modifiable data collection points. iRIS™ (integrated Research Information Software) enables the tracking of all types of clinical procedures as well as non-standard data that is specific to each study and/or subject on study.

Easy to Learn, Easy to Use:

Study Assistant is designed to ease the work of repetitive tasks allowing researchers to better manage clinical trials. Procedures and processes are logical, yet extremely flexible to suit your site's unique needs. Enhanced Graphical User Interface (GUI) menu selections enable users to quickly embrace iRIS .

Cuts Paperwork and Saves Time:

Study Assistant™ streamlines workflow and empowers individuals to complete the protocol tasks with a high level of efficiency and effectiveness, significantly increasing the quality of work being completed.

Wizard-Based Forms Process:

Researchers are guided through the complicated application process by using our industry-leading application wizard. Configure your application to automatically present the user with the next logical section of questions that they need to complete, based upon the user's response to previous questions.

Study Planning:

Simplify and expedite the study setup process through our Protocol Definition Matrix. Setting up a study plan is quick and easy to complete. Select your protocol's clinical and administrative tasks from a configurable drop-down list; then simply check which tasks will be performed during each visit. Tasks can also incorporate costs and revenue which makes it very easy to prepare study budgets and financial reports. A timeline can be associated with each visit establishing target dates as subjects are enrolled.

Grants & Contracts Assistant:

After completing your study plan, a budget is created which integrates with your site's charge master. Grants/Contracts Assistant™ will automatically notify you when procedures, visits, or patient completions are ready to be billed. Payment milestones can be set and your site's financial officer(s) notified when those designated actions occur. Setup and manage your project's cost centers, general ledger and billing status.

Internet Driven:

The Study Assistant program connects to a centralized database through standard Internet and Intranet tools. Data entry is accomplished through a common browser (Internet Explorer, Netscape, Mozilla, or Firefox) on a Windows, Macintosh, or UNIX platform. This extreme compatibility allows for the software to be accessed over the widest range of platforms and products available on the market today.
